

Computer Fundamentals: Predeep K. Sinha & Priti Sinha Learning Objectives S Convert a number's base S Another base to decimal base Decimal base to another base Some base to another base Shortcut methods for converting Binary to octal number Cotal to binary number Binary to hexadecimal number Hexadecimal to binary number Fractional numbers in binary number system

Number Systems Two types of number systems are: § Non-positional number systems § Positional number systems Ref Page 20 Chapter 3: Number Systems Slide 4/40

Non-positional Number Systems

§ Characteristics

- § Use symbols such as I for 1, II for 2, III for 3, IIII for 4, IIIII for 5, etc
- § Each symbol represents the same value regardless of its position in the number
- § The symbols are simply added to find out the value of a particular number

§ Difficulty

§ It is difficult to perform arithmetic with such a number system

Ref Page 20

Chapter 3: Number Systems

Slide 5/40

Computer Fundamentals: Pradeep K. Sinha & Priti Sinha Positional Number Systems

§ Characteristics

- § Use only a few symbols called digits
- § These symbols represent different values depending on the position they occupy in the number

(Continued on next slide)

Ref Page 20

Chapter 3: Number Systems

Slide 6/40

Positional Number Systems

(Continued from previous slide..)

- § The value of each digit is determined by:
 - 1. The digit itself
 - 2. The position of the digit in the number
 - 3. The base of the number system

(base = total number of digits in the number system)

§ The maximum value of a single digit is always equal to one less than the value of the base

Ref Page 21

Chapter 3: Number Systems

Slide 7/40

Computer Fundamentals: Pradeep K. Sinha & Priti Sinha

Decimal Number System

Characteristics

- § A positional number system
- § Has 10 symbols or digits (0, 1, 2, 3, 4, 5, 6, 7, 8, 9). Hence, its base = 10
- § The maximum value of a single digit is 9 (one less than the value of the base)
- § Each position of a digit represents a specific power of the base (10)
- We use this number system in our day-to-day life

(Continued on next slide)

Ref Page 21

Chapter 3: Number Systems

Slide 8/40

Decimal Number System

(Continued from previous slide..)

Example

$$2586_{10} = (2 \times 10^3) + (5 \times 10^2) + (8 \times 10^1) + (6 \times 10^0)$$

$$= 2000 + 500 + 80 + 6$$

Ref Page 21

hapter 3: Number Systems

Slide 9/40

Computer Fundamentals: Pradeep K. Sinha & Priti Sinha

Binary Number System

Characteristics

- § A positional number system
- § Has only 2 symbols or digits (0 and 1). Hence its base = 2
- § The maximum value of a single digit is 1 (one less than the value of the base)
- § Each position of a digit represents a specific power of the base (2)
- § This number system is used in computers

(Continued on next slide)

Ref Page 21

Chapter 3: Number Systems

Slide 10/40

Binary Number System

(Continued from previous slide..)

Example

$$10101_2 = (1 \times 2^4) + (0 \times 2^3) + (1 \times 2^2) + (0 \times 2^1) \times (1 \times 2^0)$$

= 16 + 0 + 4 + 0 + 1
= 21₁₀

Ref Page 21

Chapter 3: Number Systems

Slide 11/40

Computer Fundamentals: Pradeep K. Sinha & Priti Sinha

Representing Numbers in Different Number Systems

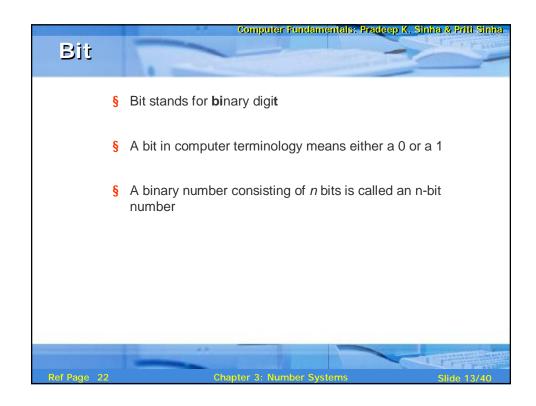

In order to be specific about which number system we are referring to, it is a common practice to indicate the base as a subscript. Thus, we write:

$$10101_2 = 21_{10}$$

Ref Page 21

Chapter 3: Number Systems

Slide 12/40

Characteristics § A positional number system § Has total 8 symbols or digits (0, 1, 2, 3, 4, 5, 6, 7). Hence, its base = 8 § The maximum value of a single digit is 7 (one less than the value of the base § Each position of a digit represents a specific power of the base (8) (Continued on next slide)

Octal Number System

(Continued from previous slide..)

§ Since there are only 8 digits, 3 bits $(2^3 = 8)$ are sufficient to represent any octal number in binary

Example

$$2057_8 = (2 \times 8^3) + (0 \times 8^2) + (5 \times 8^1) + (7 \times 8^0)$$

= $1024 + 0 + 40 + 7$
= 1071_{10}

Ref Page 22

hapter 3: Number Systems

Slide 15/40

Computer Fundamentals: Pradeep K. Sinha & Priti Sinha

Hexadecimal Number System

Characteristics

- § A positional number system
- § Has total 16 symbols or digits (0, 1, 2, 3, 4, 5, 6, 7, 8, 9, A, B, C, D, E, F). Hence its base = 16
- § The symbols A, B, C, D, E and F represent the decimal values 10, 11, 12, 13, 14 and 15 respectively
- § The maximum value of a single digit is 15 (one less than the value of the base)

(Continued on next slide)

Ref Page 22

Chapter 3: Number Systems

Slide 16/40

Hexadecimal Number System

(Continued from previous slide..)

- § Each position of a digit represents a specific power of the base (16)
- § Since there are only 16 digits, 4 bits (2⁴ = 16) are sufficient to represent any hexadecimal number in binary

Example

$$1AF_{16} = (1 \times 16^{2}) + (A \times 16^{1}) + (F \times 16^{0})$$

$$= 1 \times 256 + 10 \times 16 + 15 \times 1$$

$$= 256 + 160 + 15$$

$$= 431_{10}$$

Ref Page 22

Chapter 3: Number Systems

Slide 17/40

Computer Fundamentals: Pradeep K. Sinha & Priti Sinha

Converting a Number of Another Base to a Decimal Number

Method

- Step 1: Determine the column (positional) value of each digit
- Step 2: Multiply the obtained column values by the digits in the corresponding columns
- Step 3: Calculate the sum of these products

(Continued on next slide)

Ref Page 23

Chapter 3: Number Systems

Slide 18/40

Converting a Number of Another Base to a Decimal Number

(Continued from previous slide..)

Example

$$4706_8 = ?_{10}$$

Common values multiplied

4706₈ =
$$4 \times 8^3 + 7 \times 8^2 + 0 \times 8^1 + 6 \times 8^0$$
 by the corresponding digits

= $4 \times 512 + 7 \times 64 + 0 + 6 \times 1$ digits

= $2048 + 448 + 0 + 6$ Sum of these products

Ref Page 23

hapter 3: Number Systems

Slide 19/40

Computer Fundamentals: Pradeep K. Sinha & Priti Sinha

Converting a Decimal Number to a Number of Another Base

Division-Remainder Method

- Step 1: Divide the decimal number to be converted by the value of the new base
- Step 2: Record the remainder from Step 1 as the rightmost digit (least significant digit) of the new base number
- Step 3: Divide the quotient of the previous divide by the new base

(Continued on next slide)

Ref Page 25

Chapter 3: Number Systems

Slide 20/40

Converting a Decimal Number to a Number of Another Base

(Continued from previous slide...)

Step 4: Record the remainder from Step 3 as the next digit (to the left) of the new base number

Repeat Steps 3 and 4, recording remainders from right to left, until the quotient becomes zero in Step 3

Note that the last remainder thus obtained will be the most significant digit (MSD) of the new base number

(Continued on next slide)

Ref Page 25

hapter 3: Number Systems

Slide 21/40

Computer Fundamentals: Pradeep K. Sinha & Priti Sinha

Converting a Decimal Number to a Number of Another Base

(Continued from previous slide..)

Example

$$952_{10} = ?_8$$

Solution:

Hence, $952_{10} = 1670_8$

Ref Page 26

Chapter 3: Number Systems

Slide 22/40

Converting a Number of Some Base to a Number of Another Base

Method

- Step 1: Convert the original number to a decimal number (base 10)
- Step 2: Convert the decimal number so obtained to the new base number

(Continued on next slide)

Ref Page 27

hapter 3: Number Systems

Slide 23/40

Computer Fundamentals: Pradeep K. Sinha & Priti Sinha

Converting a Number of Some Base to a Number of Another Base

(Continued from previous slide..)

Example

$$545_6 = ?_4$$

Solution:

Step 1: Convert from base 6 to base 10

$$545_6 = 5 \times 6^2 + 4 \times 6^1 + 5 \times 6^0$$

= $5 \times 36 + 4 \times 6 + 5 \times 1$
= $180 + 24 + 5$
= 209_{10}

(Continued on next slide)

Ref Page 27

Chapter 3: Number Systems

Slide 24/40

Converting a Number of Some Base to a Number of Another Base

(Continued from previous slide..)

Step 2: Convert 209₁₀ to base 4

4	209	Remainders
	52	1
	13	0
	3	1
	0	3

Hence, $209_{10} = 3101_4$

So,
$$545_6 = 209_{10} = 3101_4$$

Thus, $545_6 = 3101_4$

Ref Page 28

hapter 3: Number Systems

Slide 25/40

Computer Fundamentals: Pradeep K. Sinha & Priti Sinha

Shortcut Method for Converting a Binary Number to its Equivalent Octal Number

Method

- Step 1: Divide the digits into groups of three starting from the right
- Step 2: Convert each group of three binary digits to one octal digit using the method of binary to decimal conversion

(Continued on next slide)

Ref Page 29

Chapter 3: Number Systems

Slide 26/40

Shortcut Method for Converting a Binary Number to its Equivalent Octal Number

(Continued from previous slide..)

Example

$$1101010_2 = ?_8$$

Step 1: Divide the binary digits into groups of 3 starting from right

<u>001</u> <u>101</u> <u>010</u>

Step 2: Convert each group into one octal digit

$$001_2 = 0 \times 2^2 + 0 \times 2^1 + 1 \times 2^0 = 1$$

 $101_2 = 1 \times 2^2 + 0 \times 2^1 + 1 \times 2^0 = 5$
 $010_2 = 0 \times 2^2 + 1 \times 2^1 + 0 \times 2^0 = 2$

Hence, $1101010_2 = 152_8$

Ref Page 29

Chapter 3: Number Systems

Slide 27/4

Computer Fundamentals: Pradeep K. Sinha & Priti Sinha

Shortcut Method for Converting an Ostal Number to I is Equivalent Binary Number

Method

- Step 1: Convert each octal digit to a 3 digit binary number (the octal digits may be treated as decimal for this conversion)
- Step 2: Combine all the resulting binary groups (of 3 digits each) into a single binary number

(Continued on next slide)

Ref Page 30

Chapter 3: Number Systems

Slide 28/40

Shortcut Method for Converting an Octal Number to Its Equivalent Binary Number (Continued from previous slide..)

Example

$$562_8 = ?_2$$

Step 1: Convert each octal digit to 3 binary digits

 $5_8 = 101_2, \qquad 6_8 = 110_2,$ $2_8 = 010_2$

Step 2: Combine the binary groups

 $562_8 = 101$ 110 010 5

Hence, $562_8 = 101110010_2$

Computer Fundamentals: Pradeep K. Sinha & Priti Sinha

Shortcut Method for Converting a Binary Number to its Equivalent Hexadecimal Number

Method

- Step 1: Divide the binary digits into groups of four starting from the right
- Step 2: Combine each group of four binary digits to one hexadecimal digit

(Continued on next slide)

Shortcut Method for Converting a Binary Number to its Equivalent Hexadecimal Number

(Continued from previous slide..)

Example

$$111101_2 = ?_{16}$$

Step 1: Divide the binary digits into groups of four starting from the right

0011 1101

Step 2: Convert each group into a hexadecimal digit $0011_2 = 0 \times 2^3 + 0 \times 2^2 + 1 \times 2^1 + 1 \times 2^0 = 3_{10} = 3_{16} \\ 1101_2 = 1 \times 2^3 + 1 \times 2^2 + 0 \times 2^1 + 1 \times 2^0 = 3_{10} = D_{16}$

Hence, $111101_2 = 3D_{16}$

Ref Page 31

Chapter 3: Number Systems

Slide 31/40

Computer Fundamentals: Pradeep K. Sinha & Priti Sinha

Shortcut Method for Converting a Hexadecimal Number to its Equivalent Binary Number

Method

Step 1: Convert the decimal equivalent of each hexadecimal digit to a 4 digit binary number

Step 2: Combine all the resulting binary groups (of 4 digits each) in a single binary number

(Continued on next slide)

Ref Page 31

Chapter 3: Number Systems

Slide 32/40

Shortcut Method for Converting a Hexadecimal Number to its Equivalent Binary Number (Continued from previous slide.)

Example

$$2AB_{16} = ?_2$$

Step 1: Convert each hexadecimal digit to a 4 digit binary number

$$2_{16} = 2_{10} = 0010_2$$

 $A_{16} = 10_{10} = 1010_2$
 $B_{16} = 11_{10} = 1011_2$

Computer Fundamentals: Pradeep K. Sinha & Priti Sinha

Shortcut Method for Converting a Hexadecimal Number to its Equivalent Binary Number

(Continued from previous slide..)

Step 2: Combine the binary groups
$$2AB_{16} = \underline{0010} \quad \underline{1010} \quad \underline{1011}$$

$$2 \quad A \quad B$$

Hence,
$$2AB_{16} = 001010101011_2$$

Fractional Numbers

Fractional numbers are formed same way as decimal number system

In general, a number in a number system with base *b* would be written as:

$$a_n a_{n-1} ... a_0 . a_{-1} a_{-2} ... a_{-m}$$

And would be interpreted to mean:

$$a_n \times b^n + a_{n-1} \times b^{n-1} + ... + a_0 \times b^0 + a_{-1} \times b^{-1} + a_{-2} \times b^{-2} + ... + a_{-m} \times b^{-m}$$

The symbols a_n , a_{n-1} , ..., a_{-m} in above representation should be one of the b symbols allowed in the number system
